Northstar Operations — Shift Handoff & Service Continuity

Fictional sample for public demonstration; not real company data or policy.

1. Shift Schedule & Handoff Times

To ensure uninterrupted 24/7 service coverage, operations shifts follow a structured handoff protocol:

- APAC to EMEA Handoff: 08:00 UTC (16:00 SGT)

- EMEA to Americas Handoff: 14:00 UTC (10:00 EST)

- Americas to APAC Handoff: 22:00 UTC (06:00 SGT)

2. Mandatory Handoff Checklist

Before completing shift transfer, the outgoing coordinator must log the following fields in the shift board:

- Active Tickets: All open P1/P2/P3 tickets with current progress and blocker summary.

- System Health: Cloud service status, API error rates (must be < 0.05%), and database CPU utilization.

- Ongoing Deployments: Canary release version, deployment progress, and rollback decision deadlines.

- Scheduled Maintenance: Any planned infrastructure maintenance windows occurring during the upcoming shift.

- Key Contacts: Primary on-call engineer and escalation contacts on duty.

3. Maintenance Window Guidelines

- Standard routine maintenance windows are scheduled on Tuesdays and Thursdays between 02:00 and 04:00 UTC.

- Production changes require a written change-request ticket approved by the Operations Lead at least 24 hours prior.
